Microsul 503B Foliar Fertilizer

Micronutrients are essential in balancing the internal chemical equation in plants. Foliar applications of our solutions are the most economical and efficient application method.

Foliar feeding is at it's best when an unexpected deficiency develops during the growing season. That's why an important facet of Prescription Agronomics is dedicated to not just prescription fertilizer blending but the analysis of soil, plant appearance, and plant tissue during the growing season. Foliar fertilizers can then be precisely prescribed, based on your specific plant needs.
